I Origin of the Universe 3

II Overview of the Universe 11

III Time 18

IV Space 25
I Origin of the Universe

1. Introduction

Before many chemical elements were found, most of the chemists didn't know how many chemical elements are there on the Earth and their relationship. Dmitri Mendeleev had already made the famous Periodic Table of the Chemical Element, calculated the atomic quantity of elements and showed us the relationship between them. The elements discovered later were all included in his Table.

The case has demonstrated everything in the Universe has the order and laws. Some people say the Universe is lawless and disorderly because they haven’t found the laws and order.

2. Origin of the Universe

All things within the time scope, including the celestial bodies and Universe, have their origin, the birth time and process of development. The beginning and ending time of the Universe, just as the $π$ and golden ratio, is mysterious and can't be reached by our wisdom. Compared with the wisdom of the Greatest Creator, our wisdom is just like a drop in the sea. I would like to share my knowledge of the beginning of the Universe gained while my mind was in peace.

When I am seeking what things in the Universe are eternal, when I am thinking about the resurrection in the Bible, when I am meditating the “The life is like a dream and all the four elements (earth, water, fire and air of which the world is made) are void” in the Buddhist scripture, when I am trying to figure out the source of Tao in the Tao Te Ching, when I ask myself why I would go to the Mortal World, why we exist and where we are going, I have known the beginning process of the Universe. However, when I am delighted to think I have found the mystery of the Universe, I suddenly realize that this mystery of the Universe beginning was explained by the humans (the ancestors of dragon nation) 6,000 years ago. It is like a Mt. Everest climber, after reaching the peak after multiple difficulties, finds someone else has left his footprint on it. Thus, I am not bold enough to claim myself as the first one knowing the Universe beginning. I only wish to add some details based on the wisdom of the past talents.
The River Diagram, The Book of Changes and the Yellow Emperor's Book of Internal Medicine have told us the process of the Universe beginning is: Wuji generates Taiji, Taiji generates two polarities, the two polarities produce the four directions, the four directions create the eight trigrams, the eight trigrams create Hexagram, and the Hexagram create all things in the Universe.

3. Before the universe was Wuji

What is the state of Wuji?

Wuji is the state of neither in nor out, neither big nor small, neither bound nor edge, neither null nor true, neither time nor space, neither material nor spirit. It is clear, chaos, everything and nothing.

The detailed explanation of the state can’t be completed even in a book containing 1 million words. I just want to stick to one point. According to the estimation of the paleontologists, the Earth was born about 4.5 billion years ago. Then where was the Earth before it was born? We can only conclude that it was in Wuji before it was born, just like the human beings. We were also in Wuji before we were born. Because the whole Universe was in Wuji before it was born, Wuji contains everything. But where is Wuji? A thing without time, space, material, spirit, inside, outside, large size, small size, border, edge, firmness or emptiness can only be described by the word “shapeless and visionary”. However, Wuji doesn’t mean it contains nothing. Instead, it contains everything. It has nothing and everything at the same time. That’s why The Diamond Sutra was profound and difficult to understand. For example:

“There is no law, and there is no lawless.”

“If Tathagata explains the laws, don’t believe it. The laws can’t be explained. If explained, they are not the laws or not the lawless.”

“The Buddhism is no Buddhism.”

“The name of Anagami is Bulai. But actually Bulai doesn’t exist. So Anagami is called Anagami.”
“The solemn Buddhist is not solemn. It is called the Solemn.”

“Tathagata says the world is not the world. So it is called the world.”

“I should eliminate all life. After doing that, I found no life has been eliminated.”

And so on.

If we don’t know the origin of the Universe, it is very difficult for us to understand the above “Buddha words”. If we can fully understand the above “Non Buddha words”, we will know the origin of the Universe.

Before everything was born, they were in Wuji. So Wuji means everything.

We wish to take an example from the mythical novel *Journey to the West* to imagine the space in Wuji.

Monk Tang and his apprentices entered the disguised monastery. The Monkey King was trapped in the gold cymbal by the demon head. So how big or how small was this gold cymbal? No matter how high or how low the Monkey King could transform himself, the cymbal could change too following him. The Wuji space before the Universe was born was in the state as the cymbal. It was extremely large and extremely small.

The space described in Einstein’s the General Theory of Relativity just refers to the space above mentioned. The size of the space is not decided by the energy. However, it is decided by the existence of matters. The more matters are transformed from the energy, the larger the space will be and vice versa. If there is no matter, there will no space. It’s the same as the relationship between the Monkey King and the gold cymbal. The space in the cymbal is decided by the size of the Monkey King transforms himself. The traditional science believes that the space is like a box and the material is a particle in the box. When the particle disappears, the space is still there. Nevertheless, the space is not like that. When the particle is not there, the space will disappear. The space is determined by the distribution of particles. The space will twist, swell, contract or even disappear as the material and its energy change the size.
How to understand the time in Wuji?

Time is generated by the movement of objects. There is no time without motion.

For example, a man is 40 years old because the cells in his body are splitting, moving and dying. If the cells were not moving or splitting, he would not have lived till 40. A piece of fresh meat will rot in a few days if placed open to the air in hot weather. However, if we put the meat in the fridge, it will not rot in months. Why? The meat in the fridge has slow even halting cell movement. When the cell movement slows down, the time of the meat is lengthened. And when the cell movement stops, the time of the meat disappears.

If a man is never born, does he still have time? If the Earth is not born, does the Earth have time? If the Universe is not born, does the Universe have time? No.

This is the time in Wuji.

The core of the quantum mechanics is the “uncertainty”. Why? The time does not lapse evenly. The time is changing. So how can you obtain the “certainty”?

That’s all about my explanation of Wuji.

4. Wuji Generates Taiji

What is the state of Taiji?

First, we have to know Taiji is generated from Wuji.

Wuji is nothing and everything. It is everything because the energy existence in it can produce the material world. It is nothing because the energy in it is not material. It is chaos without firmness or emptiness. It is like the sky. When the sky is clear, there is nothing in it. But when it is cloudy, we can see the clouds and lightings and hear the thunders. Then there is everything.
In Wuji, there is the intangible energy. The intangible energy (in contrast with the tangible energy) is moving irregularly. When the irregular movement, accidently on a point, formed a specific order or symbol, the entire Wuji has formed a potential power arrow called the “tornado” centered on this point.

This potential power arrow, or “tornado”, is just called Taiji. (Please note that the tornado is simply a momentum with only potential power. It does not have kinetic energy because it is not rotating.)

This is how Taiji is generated from Wuji.

Taiji is in such a state: it is the one, amorphous, the unity without opposites, and an extremely large energy cluster (It is just like a locked reservoir containing billions of billions of Pacific)

The Taiji is just the Greatest Creator in common sense.

In Tao Te Ching, Lao Tzu said, “Chaos was born before there was the Earth and Heaven.” Before the Universe was born, “something” existed. This “something” is Taiji, the psychic energy of the Greatest Creator. Lao Tzu named this “something” as Tao because he confused the nature and psychic energy of the Greatest Creator.

After understanding what Wuji is, we can understand Buddha and Buddhism. After understanding Taiji, we can understand Tao and Taoism.

5. Taiji creates the Two Polarities

What are the two polarities?

It refers to the phenomenon of opposition.

For instance, in the state of Taiji, everything is the one and amorphous. But in the state of the “two polarities”, the intangible energy is shown up in a tangible form. The Sun, for example, is an energy cluster. It has been transformed from the intangible energy form in the state of Taiji into the tangible energy form. So the energy is classified into the tangible energy and
intangible energy. “None” and “Existence” form the “two polarities”, namely, the unity of opposites.

The contents of the “two polarities” include: none and existence, firmness and emptiness, Yin and Yang, positive and negative, static and dynamic, left and right, up and down, exterior and interior, front and rear, high and low, noble and humble, hard and soft, big and small, strong and weak, dark and light, male and female, rich and poor, fortunate and unfortunate, gain and loss, merit and fault, more and less, life and death, true and false, good and evil, beauty and ugly, etc. They are the unities of opposites.

Everything in the Universe as we know is the demonstrations of the “two polarities”.

Then how are the “two polarities” were born out of the Taiji?

We have known that the irregular movement of energy in Wuji accidently formed a certain order. All the energy, in a short while, formed overwhelmingly an intangible potential energy. If the potential energy is not given out, it will only remain latent like a “paper-made tiger”. However, when all energies gather at the central point, the energy center has changed its nature, just like the water will evaporate when heated to a certain degree. At this time, the energy center, or the nucleus, is no long a kind of energy. Instead, it has become a special structure surrounded by great energies. When this structure is complete, the Consciousness comes into being. It is just like a fertilized egg without Consciousness. When it keeps absorbing energy in its mother’s uterus and improves its structure, a conscious animal (human) will be born.

The gathering of mammoth energies has led to the alienation of the energy center, resulting in a structure. The constant improvement of the structure ended up with the emergence of the Consciousness, which is the symbol of life birth. The Consciousness gathering all energies then started the process of creating the Universe. And it is the Greatest Creator.

After the Greatest Creator is born, the energy in the Taiji began to move around the Greatest Creator’s Consciousness. We can also say that all energies move around the structure of the energy center. Just like a human body, when your consciousness tells you to urinate, the bladder door is open and the urine goes out. When you want to look at the sky, your head will be
raised and your eyes opened automatically. When you want to have sexual intercourse, your penis is erected.

After the Greatest Creator is born, the “two polarities” come into being, the celestial bodies show up, the celestial movement begins, the unlimited space is born, the time starts and everything gets into the movement cycle of life and death.

6. The “Two Polarities” create the “Four Directions”

The “two polarities” have brought about the “four directions”. There is south, north, east and west. There is front, rear, left and right. There is life, growth, decline and death. There is quadrant 1, 2, 3 and 4 in the function image.

7. The “Four Directions” create the “Eight Trigrams”

Because there is south, north, east and west, there are now 8 directions including the east, southeast, south, southwest, west, northwest, north and northeast. The eight directions are called Qian, Dui, Li, Zhen, Xun, Kan, Gen and Kun respectively, forming the 8 trigrams. Each direction has its special meaning. Each direction has its different chance changes. Let’s take a person as an example. If he remains healthy in the south, he might find it difficult to get accustomed to the north. If nothing goes smooth in the east, he may achieve success in the west and the ugly duckling might become the white swan. Even grass will have different growth model and blossoming timing in different directions and locations.

8. The Permutation and Combination of the 8 Trigrams (Qian, Dui, Li, Zhen, Xun, Kan, Gen, and Kun) Produce the 64 Trigrams

The 64 trigrams are corresponding to the 64 factors in the Universe. But as to the details of these 64 factors, because they are related to all the mysteries in the Universe and hidden to the common people, even the King Wen of Zhou in the *Canonization of the Gods* didn’t know all of them. And the most achieved Taoists in China only knew a few of the factors. Sakyamuni masters half of them and Jesus only knows a few more than Sakyamuni does.

We often hear people say “No disclosure of the Heaven secrets”. The heaven secrets are just hidden in the 64 trigrams. The permutation and combination
of the 64 trigrams have caused the birth and death of all things in the Universe. The things that you can’t imagine are just the combination of 2 factors. The power of Jesus lies in his mastery of the formula of these factors.

The birth and death of all things, the limitless mysteries and all changes and movements in the Universe are hidden in the permutation and combination (formula) of these 64 trigrams. “No coming, no going, the time-space ends and origin shows up.”

This is the brief process of the birth of the universe.
II Overview of the Universe

1. The Universe is the Order

The Universe exists as the order and remains relatively stable with the total energies reaching zero.

2. The Definition of the Universe

The space with the negative and positive energies reaching zero is called the Universe. Or the space with the balanced matter and antimatter is called the Universe.

3. The Shape and Structure of the Universe

The Universe is called the large Universe and small Universe. The borderless one is called the large Universe and the one with borders is called the small Universe. The large Universe is made up of numerous small Universes.

π=3.141592653589… It is the symbol of the large Universe, which is limitless, no cycling, endless, vast and eternal.

The small Universe is the relatively secluded and independent galaxy space in the large Universe, like the swirls in the river. Each swirl is a relatively independent rotating space. It’s also like the eggs in a henhouse in which each egg is an independent and secluded space.

The Earth we live on is in a small Universe. We might as well call this Universe the Earth Universe to distinguish it from the other small Universes.

The Earth Universe is a saucer-shaped Taiji oval with its edge covered by a layer of high-energy “clouds”. The layer of high-energy “clouds” is the crust of the Earth Universe. At the same time, it functions like the stator of a motor. It is a rotating magnetic field, pushing the things on the Earth Universe to rotate counterclockwise.
The structure of the Earth Universe is an oval-shaped rotating object composed of Yin and Yang, the two meshing revolvers, just like the Taiji diagram of Taoism in China. The difference is that the Taiji diagram is a circle while the Earth Universe is a Taiji oval body. We call the Taiji Oval body the Law-rotary Galaxy, in which there are almost 3,000 rotary-river galaxies. Each rotary-river galaxy is a relatively independent rotating one. In each rotary-river galaxy there are almost 3,000 Milk Way systems with each containing almost 3,000 solar systems.

The rotating rate of each celestial body and galaxy seems to be constant. But the fact is that the rate is changing all the time. Each celestial body, when is on the short axis, the rotating speed reaches the maximum. The farther it is from the short axis, the slower it rotates. When reaching the two ends of the long axis, the celestial body will halt for a short time, on which moment all the physical life on the celestial body will die. The spiritual body of the dead life will enter the negative pole of the Taiji oval body, which is called one kalpa. After passing the long axis, the spiritual body will get out of the negative pole of the Taiji oval body and enter the positive pole in the form of the physical life. Because the celestial bodies and galaxies have different mass, they stay on the long axis for different periods of time. So they are in permutation and combination again. For example, the Earth, in the next cycle, might become a desert land like the Mars, which might be full of life like the Earth.

The spatial distance between celestial bodies and galaxies is also in constant change. The closer they are to the short axis, the more distance they will have. The Universe seems to be expanding. The closer it stays to the long axis, the less distance it will have. It seems that the Universe is shrinking.

At present, the Milk Way System is now floating towards the short axis.

The Earth Universe is classified into the Positive Universe and Negative Universe.

4. The Positive Universe

The physical world is the Positive Universe

All the matters, tangible, seeable, touchable, hearable, perceptible, and those that can be measured by the instruments belong to the scope of the Positive
Universe. The dark matters and energies are also classified into the scope of Positive Universe.

For instance, the house, desk, plant, animal, human body, cloud, wind, thunder, lightning, sound, odor, molecule, atom, electron, ion, proton, neutron, nucleon, meson, hyperon, varitron, anti-particle, light ray, gravitation, magnetic force, infrared ray, ultraviolet ray, cathode ray, positive ray, ultrasonic wave, infrasonic wave, bio wave, the noise caused by the high and low frequency oscillation, diffusive substances emitted by the radioactive elements such as radium, uranium, plutonium and francium, and the universal gravitation all belong to the scope of the Positive Universe.

All things existing in the Universe in the form of elementary particles are matters.

The physical world is the world that can be explained and will be explained by the science.

The scope can be explained by the science belongs to the scope of matters. The scope that can’t be explained by the science belongs to the “superstitious” scope not accepted by the people.

When science tries to explain the things beyond the material world, it is not science any more. Instead, it is called the anti-science or super-science.

All the religions and the superstitious things are the super science that stands against the science.

5. The negative Universe.

The antiworld is the Negative Universe.

All the super matters, intangible, and others that can’t be seen, heard, touched, measured, or felt but affect the material world all belong to the scope of the Negative World.
For instance, the universal repulsion, time, space, spirit, consciousness, thinking, soul (life soul) belong to the nonmaterials. The belief, Tao, law, order, spell and Buddhism belong to the nonmaterials. The angel, God, ghost, Buddha, Devil and other amorphous life are the non materials. The dream scene, origin of the spiritual feeling, the bridge of the telepathy, the passage of the thinking telepathy, the paradise, the hell, Allah, Ancestor of the Buddha, Yahweh and their residences, the Zero World, the Heaven World, the venue of the Gods, and the Elysium where the spiritual body goes to after the dies all belong to the scope of the Negative Universe.

“The fantasy is no fantasy, and the reality is no reality” and “The seeable is not usable, and the usable is not seeable” as believed by the Taoists belong to the scope of the Negative Universe.

All energies and energy groups that do not exist in the Universe in the form of the elementary particles are the antimatters.

The Positive Universe can be explained by the science and is easy to be understood. The Negative Universe, till now, can only be felt by the people not very clearly. It can't be explained by the science and is difficult to understand.

The Negative Universe is the antiworld. The Negative Universe is the origin of the matters. The material world is the reflection of the antiworld and image of the Negative Universe. Everything in the material world is in constant movement and change. They have birth and death. On the contrary, everything in the Negative World exists in the relatively eternal state.

6. The Law of the Universe, the Unity of the Opposites

Everything in the Universe exists in unity of opposites, such as Yin and Yang, positive and negative, man and woman, male and female, front and rear, exterior and interior, high and low, up and down, firmness and emptiness, glory and shame, static and dynamic, noble and humble, weak and strong, rich and poor, merit and fault, fortunate and unfortunate, gain and loss, forward and backward, more and less, day and night, past and future, tangible and intangible, life and death. Each pair depends on each other. Without one, the opposite one will not exist.
The unity of the opposites is the presentation of the Universe nature. However, it is a major law of the Universe existence.

The negative is there because of the positive, and the universal repulsive force is there because of the universal gravitation. It is the same with the matter and antimatter, particle and non anti-particle, photon and anti-photon, energy and negative energy, the left rotation and right rotation, and the Mortal World and the Fairy World.

You can find the black where you find the white and the male where you find the female. It is the same with the life and death, flesh and soul, paradise and hell, law and lawless, chaos and peace. When the whole society is seeking wealth, there must be some people seeking knowledge. When the whole society is at peace, some force must be preparing for the riot. When all the human beings face the disaster because they have violated the God’s orders, the representatives sent by the God and Buddha will help them to wake up. The extremely dynamic will lead to the static, and vice versa.

7. The Movement of the Universe

The movement of the large Universe is initiated and operated by the structure in the Taiji energy cluster center. That is to say, it is initiated and operated by the Consciousness of the Greatest Creator. The small Universe, where the Earth lies in, is fuelled by the hull of the Earth Universe, which is a rotating magnetic field belt.

In the Universe there are two groups of energies with the opposite nature, like the action and the reaction. They have the different power but reverse directions. So the total energy stands at zero.

These two groups of energies are the “Buddhist Power” maintaining the orderly operation, stability and balance of the Universe. If we add these two groups of energies, we will get zero. However, when either group is more powerful than the other, the Universe will disappear immediately.

For instance, the universal gravitation and the universal repulsive force have the same power and opposite movement directions. Because the total is zero, the Solar System, the Milk Way System, the Law-rotary system and Rotary-river System move in an orderly way. If there is only the universal gravitation without the universal repulsive force, all the celestial movement in
the Universe will become the direct-line movement and join together in the ultra light speed. So the Universe will disappear immediately. If there is only the universal repulsive force without the universal gravitation, there will not be the rotations of the celestial bodies in the Universe. The Earth will not move around the Sun and all the celestial movement will become the direct-line movement. The celestial bodies will expand rapidly at the ultra light speed. In the end, they will burn and die and the Universe will disappear, too.

In the human society, the science and “superstitious” are also two groups of energies with equal power and mutual repulsion with total zero energy. There is no science without the “superstitious” and vice versa. These two forces constrain each other and move forward together. The more developed the science is, the more active the “superstitious” activities will become, because the science will prove that the “superstitious” is not “superstitious” at all. Instead, it is the super science. On the other hand, the more powerful the “superstitious” is, the more developed the science will be, because the “superstitious” will expand the scope of the science.

The science and the “superstitious” is a unity of the opposites. The science finds it impossible to eliminate the “superstitious”, which also finds it impossible to eliminate the science.

The Positive Universe is laevorotation and the Negative Universe is dextrorotation.

8. The Point for Understanding the Universe

The correct understanding of the Universe will help us build the correct Universe concept, world concept and life concept. When we gradually know about the Negative Universe, there are fewer mysteries left behind for the world. We will know our past and future, Buddha, Buddhism, Tao and Taoism, Jesus, and the Greatest Creator. We can face the death and the life sufferings peacefully. In particular, when have made self-improvement and self-refinery to a certain degree, see the Thousand Year World, Ten Thousand-year World and the Elysium World, we will long for them, just like those people live in the poor countries suddenly see what the developed countries are like in TV. We will know what we should do and will discover the value and mysteries in the Life Chanyuan.

You might think that the Ten Thousand-year world hundreds of thousands of light years away is much too far away. But the distance is just one step.
People living a few hundred years ago used to think that there was a long distance between the Cape of Good Hope and San Francisco of the States. But today we know it will only take us two days to get there. And instant reaching can be achieved via telephone or Internet. When we have dreams, the spiritual human body gets out of the flesh body and reaches his friends or relatives faraway in a short distant. Even, the spiritual body can follow the time axis to meet with the deceased friends or relatives. For the spiritual bodies, there is no distance of time and space. When we have developed into the spiritual bodies of the Celestial Beings, it is an easy task to travel through time-space.

The Universe is our home. The Earth is just a point in the home, a temporary “hotel”.
III Time

1. The Meaning of Time

The time is a recorder of the motion of matters.

Time rises from motion. There will be no time without the motion.

The time exists within all the moving matters and is spread in all the material Universe space.

The time is antimatters.

We can’t see, touch, listen, measure, catch, seize, store, borrow, or debit the time. Time is intangible. It can be described but not depicted.

The time only exists in the material world. There is no time in the antiworld (the Negative Universe), just like the thunder and lightning only existing in the clouds. If the sky is clear, there will be no thunder or lightning.

The time is both positive and negative.

The future time is positive and the past time is negative.

The time is universal or specific. The universal feature applies to the whole while specific feature applies to the individual.

We pick up two mature pears from the tree, and place one in the open air and the other in the fridge. Five days later, the pear in the open air has rotten while the one in the fridge is still fresh. From the universal point of view of the time, these two pears both last 5 days, or 120 hours. But from the perspective of the specific feature of the time, 1 day for the pear in the open air is more than 24 hours while 1 day for the one in the fridge is less than 24 hours, or even 1 hour.

Time is variable.
In different spaces, time is different. The humans regulates that one rotation of the Earth is a day and one revolving of the Earth around the Sun is a year. One revolving of the Moon around the Earth is a month (lunar calendar). One day contains 24 hours and each hour has 60 minutes. The regulations have given convenience to the human activities and the whole world can work and rest regularly in the same time system.

The above calculation is made on the premise that the certain object on the Earth remains still. For the objects in motion, the time is a variable. For instance, you take a spaceship and fly to the east. According to the travelling speed of the spaceship, you will spend less than 24 hours a day. The faster the speed is, the less the time you spend. If the spaceship has the same speed as the Earth rotation, 1 day has 24 hours for you. If the spaceship flies to the west and exceeds the speed of the Earth rotation, the 1 day of yours is more than 24 hours. If the 1 day of yours has 240 hours, it has 2,400 hours for the people living on the Earth. If you maintain the movement state, you will not feel the existence of time. 50 years later when you come back to the Earth, you will find your friends in childhood have all become elderly while you are still a young man.

Different locations have different time. What we mean by New York time, Beijing time, London time, etc account for the above statement.

Different zones also have different time. The tropical and the frigid zones have different time. If one person is frozen in the ice, he will have unlimited time. If one man stays in an extremely thermal environment, his time will be shortened. Meanwhile, the time on the sea and the time on the mountain are also different.

Different mass has different time. The greater the mass is, the longer life it will have, and vice versa. For the objects with the same size, the diamond has longer life than other stones, wood and clouds. For the objects with the same mass, the larger they are, the shorter time they will have.

The time of one-kilo meat is shorter than that of one-kilo stone. For the people with the same weight, the higher he is, the shorter time he will have. The time of the people living on the Earth is longer than that of "those" living on the Moon. For instance, a man who can live 80 years on the Earth can only live 30 years on the Moon.
Different Universe spaces have different time. The time on the Moon is different from that on the Earth. The time on the Earth is different from that in the Sun. The man who can live 100 years on the Earth can live 1,000 years in the Thousand Year World and 30,000 years in the Ten Thousand-year World. The main reason is that the Earth, the Thousand Year World planet and the Ten Thousand-year World Planet have different mass. The so-called “one day in the Heaven equals one year in the Mortal World” is because they are in different spaces.

The time can be expanded or compressed. The higher speed the objects have, the more compressed the time will be, and vice versa. For instance, two people start from the same line and walk towards the same goal. He who walks faster will reach the goal. His time has been compressed. The other one just walks slowly, stopping at times, picking up gravels on the ground, touching the grass, saying hell to the bird and bye-bye to the cloud, he will reach the goal later. His time has been expanded.

2. The Time of LIFE

Because life is composed of matters (flesh body) and antimatters (spiritual body), the time has two meaning for the life, too. For the flesh body of the life, time is eternal. That is to say, the flesh body of the life will have the process of birth, growth, aging and death. No power can stop the process. The humans can’t have the eternal time.

But the spiritual body of the life is antimatter, which is not limited or constrained by the time and can cycle in the limitless space.

For the flesh body, the time is vertical and composed of the past, present and the future.

For the spiritual body, the time is horizontal. From either point of the life, the spiritual body can enter the horizontal time, going beyond life and death and entering the eternal time-space.

In the virtual function image, X axis represents the time attributes in the scope of matters while Z axis stands for the time attributes in the scope of antimatters. X axis is vertical and the Z axis is horizontal. X axis only travels in the space of the past, present and future. And the Z axis can get out of the constraint of “the present” in a short time and enter another space.
So we can conclude that when a person dies, only his flesh body dies. The spiritual body of his life follows Z axis (at the time point of his death), entering another time-space and starting a new life in it.

3. The Surmounting of Time

I Perception

Time changes everything.

Time is the key factor to the deformation of objects. The mountain 1,000 years ago was different from what it is today. The river 100 years ago was not the same as it is today. The person 10 years ago is different from what he is today. It is the same with the tree, flower, moth, cloud, meat, spark and thunder.

Without the movement, there is no time. If there is no orbiting of the Earth around the Sun, there is no such time as the “year”. If there is no Earth rotation, there is no such time as the “day”. If there is no revolving of the Moon around the Earth, there is no such time as the “month”. And there will not be “minute”, “hour”, or “second”. The time will be zero. So without movement, there will be no time. Without the time, everything will be eternal.

As far as the object relativity is concerned, when two objects have the same running speed, the time between them is zero. When the moon revolves around the Earth at the same speed with the Earth rotation, there will be no “month”. When the Earth revolves around the Sun at the same speed of the light speed, the time in the universal meaning will disappear. Or we say the time in the narrow definition stops while the time in the broad definition still exists and affects the life on the Earth.

As far as the objects themselves are concerned, the faster they move, the quicker the time runs and the shorter life they have, and vice versa. For instance, there are 2 cars, A and B. Car A drives at 120 km per hour and Car B at 60 km. Contrasted with other objects, these two cars all run 1 hour. But for Car A, the time is two times more than Car B. If Car B is scrapped in 10 years’ time, Car A will be scrapped in 5 years. For humans (excluding other factors and we only focus on the impact of speed on human life), the people who do things slowly and orderly will live longer than those always living in a
hurry and with efficiency. The late-maturing kids will have longer life than the early-mature kids. The shepherds live longer than the athletes. The nuns live longer than the prostitutes. And Taoists live longer than the worldly people.

Time changes everything. And everything exists in the specific time. To attain eternal existence for an object, we must make the time eternal where it exists.

Time determines everything.

In the scope of time, everything is empty and illusion. You work hard persistently, but what are you creating? As a matter of fact, you are pursing the illusion. Does the Roman Empire still exist now? Who can remember the name of your grand grandfather? Some people might think that your merits will be written in the history and your name will be admired by generations of people. But the fact is that the Earth will one day perish when it moves to the long axis of the Earth Universe. Or several hundred years later, the human society will have fundamental changes and your merits will turn to dust and ashes. Who will mourn you every day? Please stop the narcissism and self-cheating.

The positive time ages the objects while the negative time returns the objects from old age to the young age. Looking into the future, we will become older. Looking back to the past, we become younger. Follow the time, we become mortal. Reversing the time, we become the celestial beings.

For the material world, the time is eternal. For the human beings, the time is short because we are not able to gain the eternal existence in the material world. The short life, for us, is valuable. We are wasting our time if we focus on seeking the material benefits instead of on seeking the surmounting of time in the limited life.

Though the life is short, we must learn how to use our time. If we don’t know the mysteries of the Universe and the essence of life, our life will be bitter, misery and unhappy even if we live 1,000 years.
II Surmounting

(1) The Movement of Polarities

On the one hand, the time only exists in the material world. Time generates from the motion of matter. There will be no time without the motion of matter. The food and vegetables stored in the fridge can be kept long because their motion has been greatly reduced. If a car drives 10,000 km a year it will be scrapped 30 years later. However, if it drives 30,000 km a year, I will be scrapped in one year. If a man works hard day and night, ponders day and night, seeks the immediate interest, desires for things eagerly, and finds it difficult to control his temper, he will have shorter life. If he can calm his mind, stop his desire, manage his mind, have a mind of integrity, keep an open mind, have a sedated mind, maintain a pure mind, and do what he want to do so as he have a peaceful mind, he will have longer life, thus surmounting the time.

On the other hand, because the antiworld has no time, we will make full use of the antimatter energy to break through the limit and constraint of the time. The spirit, consciousness, thinking, belief and soul of human beings are all the antimatters. If we live in the world of these antimatters, time will have no impact on us and we can surmount it.

The spirit, consciousness, thinking, belief and soul of humans are connected with the whole Negative Universe (the antiworld). “The achievement will be made by your thinking” (by Xue Binyi), “The art of application lies in the heart” (by Taoists), “Tao abides in non-action, Yet nothing is left undone” (by Lao Tzu), “Mind rises from no certain things.” (by Sakyamuni), “The richness lies in the heart rather than the worldly belongs.” (by Mohammed), “Your heart is where your treasures are.” (Jesus). We will go where our heart is. Only by understanding the meaning of the above words, we can surmount the time and reach eternality.

(2) Go Against the Time

What is going against the time? We see the time as a train and we are sitting on the train. The train move forward and we run backward. When our speed is the same as that of the train, the time halts or we stop the aging. If we run backward faster than the train, we have entered the negative time and can become younger. The speed we talk about is not the speed in the material
world. If understand it with the speed of the material world, we can never run faster than the time.

Going against the time is just boating upstream. For the common people, it is difficult because people live in the material world and their tongue, mouth, eyes and nose are manipulated by the materials. In particular, they are heavily constrained by the worldly society, such as the money, fame, beauty, power, the burden of sustaining the elderly and the family, and the daily affairs. And going against the time violates the natural laws, which is an almost impossible task for the common people. They don’t understand it and have no time to practice it. If doing improperly, they will suffer from heavy losses, able to handle their daily affairs or attain the younger age.

Going against the time is a reverse approach of thinking of senior level. It is quite suitable for the self-improving people in the Buddha and Tao temples. Considering the acceptance of the worldly society, I will not explain it in details. If we are destined to meet, I will explain it to you face to face.

Time is impartial to everything in the Universe. Hope Allah, ancestor of Buddha, Yahweh and the Greatest Creator will bless you so that you can surmount the time.

The movement of polarities and going against the time are to lengthen the life so that you have enough time to refine and improve yourself, change the life track and develop your life into the structure in the higher level. When the flesh body dies, the spiritual body of our life and enter a completely new world along the Z axis and through the time-space.
1. Introduction

Till now, humans are familiar with only one side of the space; namely, they only know the space of the material world and don’t understand the space in the antiworld. We falsely believe that only the environment on the Earth is suitable for human living. And after landing on the Moon and taking photos of the Mars, we are, after short-time excitement, sad to feel that the neighbors of the Earth are not suitable for human living and it is an impossible task to reach the more distant planets.

Tragedies happen frequently due to our knowledge shortage of the Negative Universe. Our confusion about the future has limited our vision within the present time and current life. All of life we live in hurry, worry and tension, neglecting the life value and meaning and mess our life which should have been beautiful.

The science and technology has been developing rapidly, such as the virtual space of Internet, nanometer technology, cloning, genetic code and decoding, Harper telescopic photos of the outer space, and applications of atomic and ionic energy. The development should have stimulated the human thinking and led us to know the antimatters, negative space, the life meaning and the establishment of a brand new value system, giving us a better, easier and more enlightened life. Nevertheless, the achievements in science and technology have strengthened the people’s consciousness of material existence, hindered us from probing into the Negative Universe, made the people busier, more nervous and worried; the relationship between humans and the society is closer, the relationship between humans themselves are more intensified; the human freedom is much reduced; people are kept farther away from their natural attributes and closer to the robotic features.

The human beings are now on an accelerating train without brakes. Even those old farmers living in the most distant areas have to take the express train whether they are willing or not. The driving force of the train comes from the human beings but the bio-robots will drive and manage the train, mechanizing all the people on it.
We find it difficult to understand the Negative Space and think it belongs to the unreliable metaphysics. In fact, when our wisdom is upgraded to a certain "degree", we can “see” it. The human eyes can only see the light rays ranging between 400 mm and 700 mm length, and human ears can only hear the sound ranging between 20 and 20,000 Hz. Frequency. There is no water in the middle of the sea swirls. The center of the hurricane is at great peace. So we can't conclude those we can't see do not exist, or those we can't hear are silent. Everyone has dreams. Are you really there in your own dream? If not, why do you have consciousness in the strange dream environment with desires and emotions? If yes, then who is the guy lying on the bed? So the sleeping person on the bed and the moving person in the dream are all “you”. The only difference is that you are in different spaces. The space in the dream is the Negative Space.

There are many negative spaces in the Universe and dream space is only one of them.

We need to understand the concept of space by using the ideas of Sakyamuni and Einstein’s theory of relativity. Sakyamuni said, “In a tiny dust, there are many limitless Chahai (worlds). In the worlds, there are dusts too. And in these dusts, there are also many worlds and the process repeats.” Chahai represents the world and the tiny dust stands for the Universe. For instance, 1 nanometer, compared with a grain of sand, is just a tiny dust. Compared with the Earth, a grain of sand is a tiny dust. Compared with the Milk Way System, the Earth is a tiny dust. Compared with the Earth Universe, the Milk Way System is a tiny dust. With the large Universe, the Earth Universe is a tiny dust. Einstein once said, “…relativity space is endowed with physical qualities; in this sense, therefore, there exists an ether.” The non materials are the contrast of the materials. The Negative Space is the opposite of the space. The celestial beings are the contrast of the human beings. The intangible life is the opposite of the tangible life.

A leaf, a water drop, and a sand grain are all a mammoth world. A silicon chip of 1 square mm can store all the books in a large library. An electrical pulse of a frequency can carry numerous things. A human body includes 130 trillion lives. A sand grain can hold thousands of villages.

For a life body that can only be seen under an electron microscope, humans are the giants. For a human being, the Earth as a living life body is a titanic giant. However, when the time-space changes, 100 million people can live on a grain of sand and will not feel crowded. In different spaces, the life has their distinctive living conditions and food system. We can never understand the
living conditions and food systems of the people living in another time-space based on our own. At the same time, we cannot regard those living in another time-space have the same height or weight as we do.

You might think I am just talking about nonsense when I tell you that you can live on the planet several million light years away. That's because you don't understand the Negative Universe Speed. So what is the Negative Universe Speed? It is the moving speed of the antimatters. For example, a person working at the Antarctic Work Station misses his hometown very much. His thinking can immediately go to his hometown. Though his body is still in the Antarctic, his thinking and consciousness is in the hometown. This is the Negative Universe Speed. For the sake of understanding, I assume the Negative Universe Speed at 1 light year per second (the actual speed is faster than that). When we enter the space tunnel, we “go” at the Negative Universe Speed.

2. The Meaning of the Space

The locations where the matters and antimatters are and their movement scope are called the space.

The space is decided by the material existence and distribution. The Negative Space is determined by the non-material existence and distribution. There will be no space without the materials. And there will be no Negative Space without the non materials.

The space includes absolute and relative spaces. The absolute space refers to the space that can expand unlimitedly. The relative space refers to the space between an object and the surrounding objects. The spaces are everywhere all the time. There is space between the galaxies and between the atoms.

The space also includes the negative and positive spaces. The space where the materials exist is called the positive space. The space where the non materials exist is called the negative space. The human bodies exist in the positive space while the spiritual bodies exist in the negative space.

The positive space twists, swells, contracts or disappears with the size of the objects’ mass energy and forms. It is a relatively stable space.
The negative space changes abruptly and has limitless changes in a short while.

The space can change the forms and movement laws of objects.

The different spaces decide the different movement laws and forms of the objects. For instance, the figure of the people living in the frigid zones is different from that of those living the tropical environment. The urban people have different looks from those living in the rural areas, the fisherman and the shepherds. The growth model, blossoming and fruiting timing of the grass in the deserts are different from those living the forest or highlands. The monkeys in the scenic areas have different capability of survival from those living in the forests. The men who get along with women for a long time have different tempers and personality with those staying longer with the other men. The mentality and behavior between businessmen and priests are different. The people working in the temples have different thinking from those working for the government.

The space change can arouse the people's change in physical function, thinking ways and mentality.

The disease contracted in the cold and moist regions will get cured automatically in the warm and dry zones. The disease contracted in cities will get cured in the rural areas. The people having average performance will achieve great success when transferred to another place. The low-rank government official might make a great deal of money if doing business.

The space change often leads to the change of situations. If one wants to change his life, he has to change the activity space. Otherwise he will die without any change or progress.

The space is changing. It can be expanded, compressed, or twisted.

When the mass of one object is equal to that of another object, the space between them is in linear arrangement. When they are not equal, the space between them will be expanded, compressed, twisted and arranged in the form of an umbrella or rotation. When the mass of an object (we can call it the energy) is bigger than the total of the surrounding objects’ mass (energy), the space between them is the linear stable space and the object is the mass center of the space. For the small-mass objects, the space distance between
the small-mass objects and this big-quality (high-energy) object is expanded. However, for the high-energy object, the space distance has been compressed.

Contrary to the Negative Space, the big-mass object, the space between the big-mass object and the small-mass objects has been expanded. For the small-mass objects has been compressed. So for the genuine Christians followers, Yahweh and Jesus just stay beside them, influencing their words and behaviors at all times. For Yahweh and Jesus, the Christians are staying distantly and the non-Christians even farther. The Muslims and Allah Mohammed, the Buddhists and Sakyamuni, the Taoists and Original Heaven Lord and Lao Tzu have the same space relationship.

“A bosom friend afar brings a distant land near”. The space distance of thousands of km has been compressed into the wall-like distance. This is for the low-energy people only. For the high-energy people, even if you are standing in front of him, he feels you are far away at the other end of the world. This is why the people with the highest energy feel the loneliest. Even if they are standing in a chaotic market, they feel isolated and mournful.

36-Dimensional Space

1-dimensional Space – Colorless Space

It is a space where we can’t see the size, form or color of the objects. Living in this space, we are just like the blind. The polar nights or the polar rights belong to the Colorless Space. The Taiji space before the Universe is born is

29
a 1-dimensional space. For the humans, the antiworld is a 1-dimensional space. All the antimatters are 1-dimensional in nature. That's why we can't see the consciousness, thinking, soul, Buddha, celestial being, Tao, law, Heaven World, Elysium World, Dream World, Hell World, Frozen Layer or Inflamed Layer. From the perspective of the 1-dimensional space of the antimatters, all of us human beings are the blind people. We can't see things in the space just like the blind people who can't see the beautiful flowers and other things in this world. We see nothing and have on knowledge of the antimatter 1-dimensional space.

2-dimensional Space, the Double Color Space

In this space, the objects have sizes and forms. But they only have the light and shade colors. For instance, the achromatopsia people live in the Double Color Space. The scenes in the Hell World, Frozen Layer and Inflamed Layer are just like the images in black-and-white TV with only light and shade colors.

If one person judges things only by good and bad, true and false, good and evil, and beauty and ugly, instead of seeing the bad in the good, the good in the bad, the false in the true, the true in the false, the good in the evil, the evil in the good, the beauty in the ugly, the ugly in the beauty, the static in the dynamic and the dynamic in the static, his thinking would be the achromatopsia thinking and he actually lives in the 2-dimensional world.

The space which only has the direct lines without curves, and the direct lines have no obliquity from the perspective of either primary vision, overlook or sectional view is the 2-dimensional space.

3-dimensional Space – Mortal World

In this space substances have forms and sizes are rich in colors. The space is constantly changing. The Mortal World is a 3-dimensional space. 98% of the human population and most of the animals, except the birds, live in this space. The 3-dimensional space is a knotless space. The movement of all matters is a knotless line, just like a rope fastened to a person’s foot. No matter how many turns he or she makes, no matter which direction he or she goes, though the rope has many twists or pile into a geometric pattern, it will become a straight when we pull the two ends of it. And there is no knot in this line. The 3-dimensional space is a relatively simple and naïve space. It is a space where we live without making efforts.
4-dimensional Space, the Karma Space

It is the thinking space where we can know the karma relationship. The human beings walk in the 3-dimensional space while the birds fly in the 4-dimensional space. The flight route of the birds can have knots. So the 4-dimensional space is the knotted space. From the perspective of the 3-dimensional space, we can only see the part of the tree above the ground. However, from the perspective of the 4-dimensional space, we can see the tree roots under the ground. Based on the material changes in the Mortal World, we can see through the phenomenon and detect the essence of things, the relationship between them, the interactive bridges, and the causes of the changes. We can also see through a certain phenomenon and find the future results. We can know the principle of quantitative and qualitative changes. We know how to achieve balance. We can find the truth out of the routine phenomena. We can find the thinking space of the laws. For instance, we can perceive the universal gravitation when seeing the apple falling to the ground. We can think about the movement rules and direction of the Universe when seeing the vine growing in spirals. We can reach the knowledge about the terrestrial magnetism and ocean currents when we see the swirls formed by releasing the water out of the bathtub. We can know the function of the motion power when we see the kettle lid jumping as the water boils. We can perceive the irrigation and power generation when seeing the wind and tides. We can know about the disease and disease spreading ways when we see the bacteria under the microscope. We can get the mystery of the genes when we see the different forms of the objects. We can conclude the life origin from the gene invariance and genetic features. We can know about a person’s health and personality when see his complexion and face. We can predict a person’s future success or failure when seeing his behaviors and listening to his words. We can see the rise and fall of a dynasty by observing the dedication of the government officials and the mentality of the civilians.

Those living in the 4-dimensional space include the greatest scientists such as Newton, Einstein, Stephen Hawking, Euclid, Copernicus, Mendel, Heisenberg, Kepler, Dalton, Rontgen, Mendeleev, Planck, Pasteur, the political leaders such as Washington, Mao Zedong, Constantine the Great, Peter the Great, Toyotomi Hideyoshi, Augustus, and Caesar, the musicians such as Beethoven, Handel and Bach, the philosophers such as Aristotle, Plato, and Beacon.

5-dimensional-Between Yin and Yang Space

It is the rim space in the crossing between the matters and antimatters and between the space and the negative space.
Three types of people find it easy to enter this space. The first type is the specialists in a field. When one person is addicted to or reaches the peak in the study of one issue or one thing, he feels, though not very clearly, the existence of super materials. Sometimes he feels he can’t find the interconnection bonds between the things in the actual world. Sometimes he feels that something happens in an incredible way. For instance, why the people who have dug the tombs of the Egyptian Pharaoh die a natural death? Why did one of the twins feel worried at the same moment when his brother died from the traffic accident thousands of miles away? Why could the girl called Shanty Debi born in Delhi of India in 1926 tell exactly the things in her former cycle of life, which proved to be true. Why was the coffin of famous American actor Charles Cleveland, who died in 1899 and buried in Galveston of Texas, brought into the sea by the tides, floating 28 years and 3,000 km before reaching his hometown, the Prince Edward Island? These things have made him feel that the things he used to study were much too trivial and insignificant. He still can’t tell what’s true and what’s false when faced with the matters and antimatters. All things seem to the reality and the fantasy at the same time. If his flesh body dies now, his spiritual body will be in the state of puzzlement. Though his flesh body has died, the spiritual body of his can’t find the way out and can only roam in the edgy place when the material world is connected with the non-material world.

The second type is those who practice or improve himself blindly. Due to the wrong method, too much hurry, old age or bad health, the spiritual body after the death of the flesh body can only drift in the connection place of the Yin and Yang worlds.

The third type is those who feel like getting into the unnecessary end or those who died suddenly at their golden age. Because they are not well prepared for death and still long for the material world, they are not willing to be brought to another world by the sudden death. Some of their wishes haven’t been realized and they are reluctant to leave the material world. However, because their flesh bodies are dead, the spiritual bodies have no carrier and can only roam for a certain time in the connection space between Yin and Yang worlds. Some cases of spirit possession are caused by their spiritual bodies. The people who are not willing to die would stay in this space. In the rural areas, the monks or Yin Yang masters will help to release the souls of the dead people. The ceremony is just to comfort them, encourage and persuade them to enter the Yin world and forget about the things in the Yang world.
6-dimensional Space, the Humans & Celestial Beings World

This space is where the people having got out of the material world constraint live. When a person’s belief is perfect innocent and he or she is not seduced by the worldly materials, they just look the same with the average people. But their inner part has been changed. They have known the Negative Universe is the origin of the matters, everything in the 3-dimensional world is simply the fantasy, the worldly people will get nothing even if they are busy working and struggling all the time, the people will end up in a dream and they are ignorant. The people in this space don’t have to work to get something. They work for pleasure, not means of making a living. They have known the Holy Spirit, Buddhism and Taoism. They know how to make use of the energy in the Negative Universe to serve them. Basically they can make achievement by thinking about them. So they are free of the worries and live an unloaded life. Except for the human celestial beings whose flesh bodies are still alive because of their self-refinatory and self-improvement, the few mages, Taoists, Christians, Buddhists, Muslims and the believer of other regions can also enter this space.

7-dimensional Space, the Proton World

This is a space where the proton can be seen. The proton is one of the elementary particles forming the nucleus of the atoms. It has the positive electron. Its electricity is equal to the electron but the mass is 1,836 times of that in the electron. In this space, the people can have the perspective as far as their eyesight can reach. It seems that the people are wearing the infrared glasses and can see what is behind a certain object. For instance, they can see the jewels and gold under the ground. They can see the people’s inner organs. They can see the flowing water under the ground. In the 3-dimensional world, the people can only see the branches, leaves and fruits. However, the people in the proton world can see the worms climbing on the tree. The beauties in the eyes of the 3-dimensional world are simply skeletons in the eyes of the people in the proton world.

8-dimensional Space, the Photon World

It is the space where the rays are beyond the 400-700mm wave lengths. The photon is the elementary particle of the light. It has certain energy, which changes to the wave lengths. The shorter the wave length is, the more energy it has. Many lights are invisible to the human eyes. Only those who have certain level of energy can see them. In this space, the people can have
the perspective farther than their eyesight range. They can see through the substances with high density, strength and energy. The objects will not show up in their original forms. Instead, they will show up in the form of light in different colors. The substances with low density, strength and energy are invisible just like the molecule in the air. The worldly people busy in the world are just clusters of light moving molecules. On the contrary, the self-improving people will emit the visible light with different colors based on the strength of their composure and psychokinesis.

9-dimensional Space, the Light Speed Circle

The space where the light can reach within 1 second is called the Light Speed Circle. The people in this space can have the remote viewing of things in the distance where the light will reach in 1 second. For instance, though the person is in Africa, he can clearly see his family members living in Asia. All the people living within the scope of 1-second light travelling can be seen by the people in the Light Speed Circle.

10-dimensional Space, the Super Light Speed Circle

The space where the light cannot reach within 1 second is called the Light Speed Circle. The people in this circle can have the trans-space remote viewing. They can see all the scenes beyond the Milk Way System and the Rotary River System, in particular the life situation of the celestial beings in the Thousand Year World and Ten Thousand Year World.

11-dimensional Space, the Molecule World

It is a space where the thinking energy of the nature shown by the molecules can be seen. The molecule is the smallest particle that can regain the chemical attributes of the original substances and can exist independently. The people in this space can see the nature of each type of molecules. For instance, the blood of an average people in the eyes of the worldly people is seen by the people living in the Molecule World as a fully-grown person who has his look and personality. If there are two drops of blood with one drop belonging to a dog and the other to a cow, we ordinary people cannot tell which is dog and which is cow. However, the people living in the Molecule World can judge them. They even know the form of the grass by seeing the grass seed.
12-dimensional Space, the Micro World

It is a space where people can ride a horse in the nanometer space. The tiny particle seen by an ordinary person in the microscope is a large Universe system in the eyes of the people living in the Micro World, which includes the Sun, mountains, rivers, animals, plants, and the park residences for the people. They can build thousands of beautiful villages on a grain of sand.

13-dimensional Space, the Law World

It is a space where the people can see the energy which causes the matters to change, for instance, the energy that drives the combination of the sperm and egg which later grow into a perfect body. The people in the Law World can only see the energy flow. The magnetic line of force, the rays of all kinds and the waves of all kinds are energy flows. They know very clear which place has good or bad Feng Shui, and who has strong or weak life power.

14-dimensional Space, the Detention Information Space

It is the space where the information will stay without diffusion in a short time. Any motion of the matters will leave the information that will not disappear in a short time behind them. All the matters are just like the "photographic films", able to record correctly what has happened around them. The Detention Information Space refers to the space which is able to show what has happened. Some police dogs can trace the whereabouts of the people by following the smell they have left days or even months ago. The people with the Buddha eyes can, according to the detention information left by the objects' movement, show what happened, for instance, 10 years ago. For example, the room has been the venue of the murdering cases, how it happened, and who the murderer was.

15-dimensional Space, the Super Time World

It is a space where the people can get rid of the time constraint, follow the time numerical axis and see what will happen or what has happened in a certain place in the future or in the past. For instance, the scenes in the beginnings of Universe origin, human origin and life origin, the scenes where the dinosaurs were dominating the Earth, the scenes of Adam and Eve living in the Eden, the scenes of the Great Flood in Noah's time, or the life scenes when the Earth is controlled by the bio-robots in the future.
16-dimensional Space, the Macro World

The big Universe is the Macro World. For the people living in the Macro World, the Earth Universe where we are is just a particle, the Solar System is simply a molecule, the Sun is the nucleus, the Earth, the Mercury, the Mars and other 6 planets are just the electrons revolving around the nucleus.

17-dimensional Space, the Time Tunnel

The time network composed of the negative and positive time and dotted the Universe space is called the Time Tunnel.

The Time Tunnel runs through all tangible objects. Each celestial body has its own Time Tunnel and each person has it, too. Once entering the Time Tunnel, the time no longer goes ahead like the ticking clock. Instead, the time is fixed and static. It is not like the calendar watch showing the past and future. Instead, the time has become the numerical axis with the two ends extending limitlessly. You can choose to live on any point. For example, you can choose to live in the times of dinosaurs, or live in the era when the current human order has been changed to experience the life at that time.

18-dimensional Space, the Space Tunnel

The passage connecting the 36-dimensional spaces is called the Space Tunnel.

For instance, after the flesh body dies in the Mortal World, the spiritual body has to pass the Space Tunnel first before it enters the upper worlds, such as the Thousand Year World, or the lower world, such as the Animal World. If the angels from the Heaven World go to the Mortal World for inspection, they have to pass the Space Tunnel before reaching the Mortal World.

All the materials in the Space Tunnel are the antimatters. All the antimatters in the Space Tunnel move at the rate of the Negative Universe speed.

All the Space Tunnels pass by the 3 World Two-way Continent in the Elysium World. That is to say, the 3 World Two-way Continent is the hub of all the Space Tunnels.
The above-mentioned 18 dimensional worlds all are related to the humans. They are the middle worlds of the life activities. When the human’s science reaches a certain level, they will have sufficient ability to enter either of the above spaces with the help of instruments.

The following 18 dimensional worlds will be the spaces which can never be reached by science. The major target of Life Chanyuan is to guide the people to the higher spaces of life. So I will focus on describing and explaining the Thousand Year World, Ten Thousand-year World and the Elysium World.

**Thousand Year World**

(1) The Location, Size and process of Entering the Thousand Year World

Starting from the Earth, it takes us about 16 minutes’ time (the Negative Universe Speed, about 960 light years) to reach the Thousand Year World. Its size is about 10 times that of the Earth. At the moment when the flesh body dies and human consciousness disappears, another consciousness is born. Suddenly you will have the feeling of weightlessness, or floating. In fact, you are now in the Space Tunnel where you don’t have fear. Instead, you have the pleasant, easy and wonderful feelings. You see no object, just the beams of color lines running backward. When you are about to reach the Thousand Year World, you can dimly see there is a colorful bridge in the distance. At the moment when you see the colorful bridge, you will lose your consciousness again and fall into the “sleep”. When you regain your consciousness, you will first hear attractive celestial music. You open your eyes and find yourself lying in the arms of fairy with the kindly people cheering around you. They are celebrating your birth which means you are in the Thousand Year World.

(2) The Geography in the Thousand Year World

There are 5 continuous ridges in the Thousand Year World with their height above 10,000 meters. There are more than 8,800 independent mounts with their height between 3,000 and 6,000 meters. There are 10 large rivers flowing into the vast and flat lake which is greatly fertile. In this vast and flat lake, there are almost 100,000 islands. There are no deserts, Gobi deserts, or seas. Everywhere you can see the mountain streams, falls and lakes.
a) Climate and Plants

The light in the Thousand Year World comes from the distant planets. There is no Sun, no day and night difference, or no shadow. The temperature is almost stable. The sky is blue dotted with clouds, which change colors when floating and produce rich imaginations. There is no rainfall, snowfall, thunder or lightning. There is often the cloud and mist with mild temperature. There are numerous types of plants, including the straight “pine trees” standing several hundred meters and the yellowwood with the tree crown covering a football court. The trees are everywhere on the mountains, islands, plains and canyons. They are not dense but green all the year. The flowers are blossoming all the time. A certain kind of flower can keep changing its color and give out different fragrance. The plants in the Thousand Year World grow very slowly. It takes a leaf 3 years (Earth time) to grow up into its normal size. It takes a pear 10 years to be mature. The life longevity of all animals and plants are 10 times of that of the animals and plants on the Earth. The average human life longevity is 100 years on the Earth (the average figure considering the future). However, the people in the Thousand Year World will live 1,000 years in average. That’s why it is called the Thousand Year World.

b) Animals and Insects

There are hundreds of thousands of types of lands, air, aquatic and ground insects in the Thousand Year World. But there is no meat-eating animal or reptile there. So you can never see the lions, wolves or foxes. Nor can you see the snakes or the lizards. The grass-eating animals have poor fertility. Of the insects, there are no fly, mosquito, bug, flea, or centipede. The food chain is different from that on the Earth. The most brutal is the bird the eats the worms.

(3) Human Society Structure and Life

The people in the Thousand Year World mainly include: 1. The local people; 2. The law violators from the Ten Thousand-year World; and 3. The Earth people who have boasted perfect human nature after self-refinery and self-improvement.

The Thousand Year World has no class society, no wealth gap, no concept of nations, no competition, no conflict, no war, no theft or robbery. However, there is a management class there. There is no modern industry, agriculture or livestock. There is no city or rural area. But there are numerous games
The only work is to build the roads, boats and houses, raise the silkworms, weave the cloth and make the clothing. Because there is no rainfall, snowfall, cold weather, hot weather, day or night, the house structure is different from that on the Earth. The people saw the wood with the rope made of a plant fiber. The wood of the houses is soft and easy to process. The roof is made by the large leaves of a solid plant. The wall is made of the dense red salix. The yard in front of the house is made by the unique flowers, grass and stones of all forms. The clothing is woven with very thin dyed silk. People wear this kind of light woven clothing, showing the celestial nature.

The people living in the Thousand Year World don’t eat meat. Their main food is the fruit, melon and half-mature cereal. Their drinks are made of the tea-like leaves soaked in the water together with honey. There are all-year-round fruits and melons here. Because the total population is less than 200 million, 90% of the fruits and melons are eaten by the animals, birds and insects.

The people in the Thousand Year World do not get married. So there is no clan or family here. They live in a society similar to the maternal society in some nations on the Earth. People love each other quite randomly. They don’t have frequent sex life as the Earth people do. People only have 3 or 4 heat periods in a year. The women have low fertility and only have 1 or 2 kids in their life. Few women will have 3 kids. The labor of the men is mainly to build roads, houses and boats while the women mainly look after the kids, raise the silkworms and weave the silk and cloth.

(4) Ideology and Values

Because they have the different objective existence from that on the Earth, the people have different perceptions, feeling, thinking and other psychological activities from those on the Earth. They don’t have class, oppression, exploitation, wealth gap, political factions, religions, or struggling. The mentality of the people is in constant peace. There is no such thing as the morals on the Earth, no sense of factional conflicts or getting the upper hand. Everything is natural and instinctive. There is no jealousy. There is no need to run a plant, shop, restaurant, or hotel. The greatest fun of the people is to attend the collective work followed by games and tourism. The supreme law is to avoid private ownership or waste. For instance, if you love a woman and want to take her, hinder her freedom and prevent her from having affairs with other men, you are violating the law. If you eat half of a pear and throw away the left half, you are wasting and violating the law. The biggest punishment for the violation is to prevent you from the collective work. The final retribution is that you will be downgraded to the Mortal World after you
live and die 1,000 years later. You will begin your sufferings in the new cycle of life as an Earth person.

(5) Others

There is no congenital disease, infectious disease, or the disease caused by the food or labor. There is no psycho disease caused by the tight human relationship or supply shortage. The people only die from the old age, not for any other reasons. There is no air crash, no traffic accident, no snake biting, shark attacking, no fighting, and no falling down the cliff. They reach their adolescent period when they are 100 years old. The youth lasts from 100 and ends at over 700. The self-refinery period lasts between 700 years till death. It is also the period when they begin to participate in the management of the Thousand Year World.

People in the Thousand Year World know about the earth and its people.

(6) Conclusion

The Thousand Year World is one with sincerity, kindness and beauty. It is a world of love, peace, happiness and the upgraded human nature. Undoubtedly, anyone with perfect human nature can go there because there is no quota.

Ten Thousand-year World

In the distance space about 58 minutes away from the Earth (the Negative Universe speed, about 3,480 light years), there is a beautiful planet, the Ten Thousand-year World. The planet is about 16 times larger than the earth. It doesn’t rotate. Instead, it just moves slowly in the Rotary-River System. It has 16 small sun satellites surrounding it and hanging in the Universe with equal distances among them. These 16 satellites with extremely high density respectively give out light waves with different frequencies, dividing the Ten Thousand-year World into 16 zones with different colors. Each zone has its own feature. The growth ways of its plants and animals, the ecological structure and climate differs from each other.

Interestingly, one of its satellites (suns) emits the black light with the heat. The zone it covers is in eternal night. Part of the animals, plants, insects and
stones in this zone has their own different colors. Standing on the mountain in this zone, you can see the mountains, rivers and skies shining splendidly, just like you are standing on the top of the skyscrapers and enjoying the household lights in the city.

On the side of the night zone is the scene of eternal dawns. You can see the charming dawn clouds and the misty horizon producing the mysterious scenes. On the other side is the eternal evening scene. The attractive evening clouds change constantly. Beside the dawn zone is the morning scene. Here the sun is always rising above the horizon, the birds are singing, the morning dews are like crystals, the mountains, forests and streams are filled with the energy of life. The air is always fresh with fragrance. You can not help but admire for the scenes from the bottom of the heart and say, “How beautiful life is.”

Across the night zone is the eternal noon with the sun shining all the time, clouds hanging in the sky, comfortable breeze and cool weather, the blossoming flowers, flying birds, fragrant grass and trees, and abundant fruits, looks prosperous and flourishing.

In the Ten Thousand-year World, there are numerous rivers and 16 seas having the same size with the Pacific. The crystal-like sea waters, the abrupt mountains, the fairy scenes, the clouds, the old trees, the falls, the streams, the flowers, small lakes and ponds constitute the attractive landscapes. In the lakes, ponds and streams, you can see the swimming ducks and mandarin ducks, the playing partridges, the dancing cranes and lotus, the swinging water grass, the jumping frogs, the swirling dragonflies, and the swarming fish, enjoying their life in the nature.

There is rainfall in all the territory of the Ten Thousand-year World. However, there is no hail or snow. Sometimes there is thunder, lightning and wind.

The people (actually should be called as celestial beings) living here live a completely different life from the Earth people. They are all naked and capable of flying on the clouds. They have no sex life and no concept of marriage. The female celestial beings don’t give birth, have no family or clan. The people living in the Thousand Year World build roads, boats, weave cloth and silk. However, the people in the Ten Thousand-year World do not engage in labor. They don’t live in the houses. Instead, they live in the Hermits’ Abodes of all kinds. Their main food is the melons and fruit such as pear. In the Journey to the East, the Monk Tang and his apprentices passed by the
Wuzhuang Temple of the Zhenyuan Celestial Being at the Mount Wanshou. The fruit they ate there is called the Ginseng fruit. The people living in the Ten Thousand-year World drink the stream water. They don't have private property. Apart from the meditation and silent practice, they would go out touring for the attractive scenes. There is no management here. Everything is peaceful, quiet and elegant.

The plants and animals in the Ten Thousand-year World grow even more slowly than those in the Thousand Year World. They blossom every 3,000 years and bear fruit in another 3,000 years. The average life longevity of the celestial beings is 35,000 years. The beards of some elderly celestial beings even touch the ground. The young celestial beings have the delicate skin like lotus. They die in a sitting posture (just as the Buddhists do). After death, their bodies will become a column of light smoke floating away. The living celestial beings will not grieve over the death. The dead celestial beings would go to one of the four worlds. Those who have never had the worldly thought will enter the Elysium World. Those who have had the worldly thought, after they die, will have the column of smoke gathering and taking form again, starting another cycle of life in the Ten Thousand-year World. Those who have often had the worldly thought will be degraded into the Thousand Year World. Those who have had the worldly thousand and put it into the practice will be degraded to the Mortal World.

The worldly thought refers to the desire for the power, wealth, family life, sexual intercourse, private property in the Mortal World. It also refers to the grief, hatred and jealousy.

The celestial beings in the Ten Thousand-year World look like the descendants of the hybrids between the Eastern and Western people. They are extremely beautiful and handsome. There are no handicapped or ugly people here. Their average height seem to be 180 cm. Just like the Mortal World, the lady celestial beings are smaller than the male celestial beings.

The Ten Thousand-year World can hold more than 10 billion celestial beings. But at present the population there is only a little bit more than 100 million. It is just like the Earth with only 6 million people. So if you can make diligent self-improvement as the Taoists do, you all have a bright future.

Those who love their families, the opposite sex, motherland, work, wealth, and position and those who like watching TV, listening to the radio, surfing the Internet, driving the limousines, reading, living in the luxury villas, fighting
against the people, Heaven or Earth are not able to enter the Ten Thousand-year World because there is no such thing there.

The process of entering the Ten Thousand-year World is: After the flesh bodies die, the spiritual body (actually your body is complete with all organs and tissues) enters the Space Tunnel. You feel weightless. Flying on the clouds, you have great pleasure and joy. In less than an hour (the Negative Universe speed), you will see a Colorful Life Bridge. After getting on the Bridge, you will change into a column of smoke and lose your consciousness for the moment. When you come to yourself again, you will resume your body form. Now you have entered the Ten Thousand-year World.

The people in the Ten Thousand-year World can clearly remember their former cycle of life, knowing about the Thousand Year World and the Mortal World.

Some inspirations for those who intend to do self-improvement in the Ten Thousand-year World:

*For the endless years we must refine ourselves and never seek fame or wealth;*

*Do good deeds every day, you can live longer. Engage in meditation, you will get protection from the celestial beings;*

*The empty space is not empty. The true color is colorless. The intangible is tangible;*

*The Yin and Yang, and the positive and negative exists in the unity of the opposites; the celestial world is remote, but it can be reached instantly;*

*Eat the sun essence and drink the moon tenet. Do this for long and you can build your celestial body;*

*Live simple, you get the support from the celestial beings. Live practical, you will reach the Tao;*
The body is dynamic while the heart is static. Your life is limitless once you ignore the wealth and authority;

Believe it or not, the Heaven mystery is easy to be known.

Elysium World

The Thousand Year World and the Ten-thousand Year World is part of the Positive Universe. From the perspective of the materials, they are the objective existence. They can be seen and touched. All the objects in them have life longevity. The Elysium World is part of the Negative World and everything there is fantasy. In the Elysium World, time almost disappears. All the objects exist by nature, instead of by the form. Sometimes they, based on their needs, can change into a certain form temporarily. But when they exist by nature, they are eternal.

The Elysium World is the Western Elysium World in Buddhism. They are also called the Buddha land and Buddha state.

Where is the Elysium World? It just lies in the Earth Universe. Then how big is it? It has the same size as the Earth Universe (including the Micro Universe and Macro Universe). We can understand that the Elysium Universe is located millions of billions of light years away. And everything around us, including ourselves, is also in the Elysium World.

As far as the dream is concerned, the space in the dream is the Negative Space. So what’s the size of the dream of each person? No one can answer this question because the size of the dream world is determined on the dreamer’s perception, experience, the degree of spiritual nature and the thinking ability. The more perception and experience we have, the purer our spiritual nature and the more capable our thinking is, the large size our dream world will have. Some people can see the Buddha, God, Sun, and rainbow in their dreams. Some people can fly on the clouds, the Thousand Year World or the Ten Thousand-year World with colors in their dreams. These dreams mean they have very pure spiritual nature. However, some people can never have such dreams in their life. The scenes in the dreams of some people are the same as the real human society because they have low thinking ability. Some people can solve the problems in their dreams that can never be resolved in the reality because they have deeper perception and experience.
The Elysium is similar to the dream worlds because they are all the negative spaces. Whether or not we can perceive it and enter it, and how deep we can enter it depend on ourselves. To enter the dream, we rely on our perception, experience, and spiritual nature degree and thinking ability. To enter the Elysium World, we rely on our Buddhist nature, without which we can never do it.

Most of the things imagined in our brains are true realities because the human brain is part of the Universe. They are the reflections of the Universe, just like any cell and blood in the human body can reflect his entire look. The human brains can not only reflect the positive space, but also the negative space. From the perspective of the negative space, the humans cannot imagine the whole look of the Universe even if their imagination is extremely rich and vast.

Now let’s come to the Elysium World. Everything of the Earth Universe belongs to the Elysium World. Then can we see the Earth where we live in the Elysium World? My answer is yes and no at the same time. We can because the Earth does exist in the Elysium World. We cannot because the Earth we see from the perspective of the Elysium World is different from what we humans know about the Earth. So can we see the Earth people from the Elysium World? The answer is also yes and no at the same time. We can because of the existence of human beings. We cannot because the people in the Elysium World do not have our looks and appearances. For example, what can we see in the dark night? We can see nothing except the luminous bodies. But does it mean nothing exists in the dark night simply because we cannot see them? No. they do exist. We can’t see them because we do not have the ability to see them at night. We can only see the fireflies shining in the night, but we cannot see their entire bodies. Can we say the fireflies have no heads or wings because we can’t see them? Definitely not. We can’t see the running rats in the field in the dark night. But the owls can. Does it mean the owls have special functions? No. That’s because the eyes of the owls have different retina structure from that of the humans. The eyes of many animals look the same as ours. But at night their eyes are shining green. In special circumstances, the objects have special expression forms. In the polar nights and polar light, the human eyes can see nothing. But it doesn’t mean nothing exists there.

In the Elysium World, the existence form of the Earth and the human beings are different from our realities. In reality, we don’t see much difference between the humans. But seen from the Elysium World, the difference between humans is great. Some people almost have no form. Some people show up as a column of dim light. Some people appear as a column of red
light. Some people show up in red colors with different height of light columns because the people have different mass or nature. The mass is a spiritual nature which is formed at birth and consolidated in the enduring and persistent belief, or the so-called self-refinery and self-improvement. The long-time self-improvement can change the people’s mass. The enduring self-deterioration can also change the people’s mass. The existence form of life is various and weird. In each persons bedroom, there are hundreds of millions of life invisible to us. In the surrounding space, there are thousands of flowing rivers and millions of celestial bodies. Each stone records the time lapse of thousands of years that we can’t see. Our brain waves keep emitting the information waves about the health and inner world, which we cannot see, either. The ghosts we often talk about are actually the life between the Yin and Yang worlds, which we cannot see, either. The scenes in each one’s dream is also invisible to us except the dreamers and people in the dream.

Seen from the Elysium World, there is life everywhere in the Universe. There is life not only on all the planets but also in the empty space. The life is not only on the land, but also under the land. The life is not only in the air, but also in the vacuum. There is life not only in the warm places, but also in cold weather. There is life on the Sun, in the stone, on the light rays, and in the radio waves. The life is everywhere and within life.

The Buddha land is remote at the Universe end. The Buddha land is near in front of us. To enter the Thousand Year World and the Ten Thousand-year World, we need time and have to pass the Space Tunnel. To enter the Elysium World, we can get there in an instant and become the Buddha very shortly.

Because the density and mass in different “zones” in the Universe and space are different, the 3,000 worlds have been formed. These 3,000 worlds, based on their distance and mutual dependence, are divided into 10 continents, namely, Lotus Continent, Borneo Continent, Kasyapa Continent, Yingwu Continent, Amita-Buddha Continent, Celestial Islands Continent, Three World Two-way Continent, Moon Temple Continent, Gods Continent and Supreme Authentic Wisdom Continent.

It is impossible to describe in detail the 3,000 worlds and 10 Continents. Till now, human beings have been living for thousands of years. Today the science has development nanometer and cloning technologies. But it still can’t describe the life body of humans, let alone the vast Elysium World. What I can show you is just an outline.
The Universe (the Earth Universe) where we live is just a “particulate” in the large Universe. To pass the Space Tunnel we have to walk through the “particulate”. It will take us 1,860 years (about 5.85 billion and 57 million light years). The “particulate” is an organic integrity revolving around the Heaven World. We call this revolving body as the Law Rotary System, which has over 3,000 Rotary-river World (the large worlds). Each Rotary-river World has almost 3,000 Milk Way Systems (the middle worlds). In each Milk Way System, there are almost 3,000 Solar Systems (small worlds). (Please note that the so-called “system” is a relatively independent celestial “clan”) It is not that one sun-like star constitutes a Solar System. In some zones several hundred suns form a Solar System. In some Solar Systems there are several thousand stars, or even tens of thousands of stars. The Earth is just a member of the Solar System of the small worlds, not sufficient to constitute a world.

From the angle of the Buddha land, we divide the 3,000 large worlds into 10 Continents, namely, the 10 Buddha states. Such division is not even division of the Earth Universe or based on the number of planets and galaxies. Instead, they are divided according to the features and mass of life, or the level of Buddhism. The “Buddha” in common sense is just a general concept. As a matter of fact, the Buddha has 10 levels of powers. Each level constitutes a Continent.

There are strict regulations in the 10 Continents prohibiting the Buddha from going from one Continent to another, just like the Monkey King draws a circle for Monk Tang with his Monkey King Bar. But we don’t have the power to enter that circle.

Before coming to the Mortal World, Sakyamuni used to live in the Lotus Continent. Later he passed the Three World Two-way Continent to enter the Mortal World. After fulfilling his mission in the Mortal World, he was then upgraded to the GodsContinent. The senior monks in the Buddhism, after dying, will go to the Lotus Continent.

Hereby I will explain the 10 Continents from the high level to the low level. The lowest level is the Lotus Continent and the highest level is the Supreme Authentic Wisdom Continent.
Lotus Continent

In the eyes of the mortal people, the Lotus Continent is an empty world in which there is nothing. In the eyes of the people living in the Thousand Year World, the Lotus Continent is a vast sea. In the eyes of the celestial beings living in the Ten Thousand-year World, the Lotus World is a vast world of lotus blossoming on the sea. In the eyes of Buddha, numerous Buddha are sitting on the lotus blossoming, the head of each Buddha is surrounded by a light circle of about 1 meter in diameter, which is called the Buddha Light. So the Lotus Continent is a world emitting the green Buddha light.

Borneo Continent

At first view, the Borneo Continent is a world of emptiness. Another look, it is a vast plain. Look one more time, it is a world of hills with the same height. On the fourth look, these hills keep changing the forms. They are like the 6-month-old babies playing the small colorful balls, the coiling dragons, the crouching tigers, the young pine trees swinging in the breeze, or the eagles about to fly into the sky. On the fifth observation, we can see the Buddha sitting in meditation eyes closed, emitting the blue light from their heads. It is a world of the blue Buddha light.

Kasyapa Continent

It is the “hometown” to the Kasyapa Buddha with stretching mountains and ridges. Each cluster of mountains circles to form an elegant “residence”. The pavilions and buildings hide in the trees and orchards. The herbs of birds fly in the sky. The rabbits and roe deer run on the fields and in the mountains. The streams flow on the plains with delicate bridges on them. The children play in the yards. The women pick up grapes and pears under the grape trellis or in the orchards. Some of the men eat watermelon in the field, some play chess in the pavilions or buildings surrounded by bamboos, some drink wine or tea, some read poems or play musical instruments, etc. It seems that it is some place in the Mortal World. Actually, all these scenes come from illusion. If you keep looking, you will find the flying birds will alight on the trees and become leaves or fruits, the playing kids will become the blossoming flowers, the chasing animals will become the stones with various forms, the bridges on the rivers will suddenly become the trees, the rivers will become the clouds and mists, the smiling women and men who are playing chess, drinking, reading poems, or playing musical instruments will disappear, and
the pavilions and buildings will become hills. All of these are the incarnations of Buddha.

**Yingwu Continent**

On the first look, Yingwu Continent looks like a rolling air mass, which later grows into a round ball with rough surface. The “ball” keeps expanding and enlarging. The rough surface gradually forms the mountains, rivers, and lakes. You can see all the animals, plants, and nature on the Earth and in the Thousand Year World, Ten Thousand-year World. On the clouds, you can see the temples rising with soft celestial music and bell sounds. Accompanied by the celestial music and bell sounds, the plants, animals, humans, celestial beings and birds gradually rise and change into the forms of Buddhist monks and nuns flying to their temples. In these temples, the burning incense produces smoke and Buddhist masters give the Buddhism lectures. After the lectures are over, the Buddhist monks and nuns return to the ground and are transformed back to their original forms. The temples in the air disappear slowly. The land contracts and becomes a “round ball”, which later becomes a rolling air mass.

**Amita-Buddha Continent**

Seen from the distance, at the end of the horizon there is a bright spot. The circles of colorful halo expand from the bright spot. As we approach nearer, we can find it is a crystal-like transparent planet bigger than the Earth. Through the halo, we can find a splendid palace in the center of the planet. In the middle of the palace a Buddha who is sitting is Amita Buddha. His body emits the colorful halo like the water ripples, which always runs through the palace, the transparent planet and gets into the vast Universe. The halo even reaches the Earth where the humans live, protects and cleanses the life of those with Buddha nature. When people say Amita Buddha and repent, the frequency of the Buddha light complies with that of the human mind. These people can get the protection from the Buddha. This is the so-called “Buddha shines everywhere”.

**Celestial Islands Continent**

Seen from 10,000 light years away, there is a disc, composed of the mist and dust moving slowly. The diameter of the disc is about 300,000 light years. The mists are the flowing Heaven River and the dusts are the planets in the Heaven River. These planets have the similar size with the Earth. They float
in the Heaven River just like the Sea Islands. The total number of these planets is 80 billion, on 30 billion of which live 1 Buddha, or the celestial being. That’s why it is called the Celestial Islands Continent.

On the Celestial Islands Continent, there are 80 billion islands and each has a name. The Buddha living on these islands have their own names too. Apart from the 30 billion islands resided by the celestial beings, the other 50 billion islands are still yet to be resided, waiting for the “people” upgraded into the Buddha from the Mortal World, Thousand Year World and Ten Thousand-year World.

Now let’s have a look at the Snow Peak Island. On this island there is a peak with 10 levels. The first level is in the amber color. The second level is in the green color. The third level is in gold. Level 4 to level 10 is in light blue, grey, milk white, purple, red, black and snow white respectively. Because the top level is shining in snow white, it is called the Snow Peak Mount.

On the Snow Peak Island lives a fairy (Buddha) called Yu’e. One day she succeeded in practicing a fantastic spell and invited some celestial beings to appreciate it.

We know that this island is nothing special except the snow peak. On the vast, empty and dry land, there is no animal, plant or human. It is a lonely island producing nothing but loneliness.

Then this day a common stone at the foot of the Snow Peak moved a little bit and changed into an extremely charming lady, who was Yu’e Celestial Being, the owner of the Snow Peak Island. She stood up straight and then sat down with her legs crossed. The illuminating fire balls flew from her head and into the sky. We followed one of these fire balls and saw it flying across the vast Heaven River and sea and reaching the Coral Castle Island. It got into the brain of a dolphin which was resting on the beach. The dolphin swung a little bit and changed into a handsome young man, who was called Dolphin Celestial Body, the owner of the Coral Castle Island. He touched her head, smiled and waved to the sea. Then the waves became violent and a flying horse with wings flew from the waves. Dolphin Celestial Being got on the horse and flew towards the Snow Peak Island.

On his way, he met the Green Island Flute Buddha riding on a black cow, the Flower Fairy sitting on a lotus from the Flowers Island, the Crane Celestial Being riding on a crane from the Thousand Birds Island, the White Man
Buddha riding on a 9-head beast from the Ten Thousand Beasts Island, and the Gold Wheel Celestial Being riding on the fire-wind wheel from the Fire and Wind Island, who were also on their journey to the Snow Peak Island. When they were about to reach the Island, they saw thousands of celestial beings in the sky. Some of them were riding the fish, some on the peacock, some on a penholder, some on a blanket, some on a dog sledge, some on a big leaf, some on the arch bridge made of hundreds of birds, some on the clouds, some on tornado, and some on comet with tails. When reaching the Snow Peak Island, they all descended to the ground and their transport became the colorful cloth on their bodies or walking sticks in their hands. These Buddha and celestial beings have weird appearances. Some are dwarfs, some are tall and strong, some are handsome, some are ugly, some have cold eyes, some have long ears stretching to the shoulders, some have the face of kids but white hair, some have beards touching the ground, some have 3 eyes, some have 18 hands, some have bald heads, and some talk like 6-year-old kids. But the lady celestial beings are pretty and fascinating.

On the empty land of the Island, there were thousands of celestial beings saying hello to each other. Then all of them turned to Yu’e Celestial Being to congratulate her on another spell. When everybody was talking happily, a thunder-like voice came from the crowd, “Sister Yu’e, we are all your guests. Do the guests have to stand on the wild filed like this?” The celestial beings traced the voice and saw a celestial being waving to Yu’e. He was more than 2 meters tall with rough black hair, red face and large head. He was the Red Face Buddha, the owner of Black Canyon Island. Yu’e smiled and said, “Please.” She spread her long right sleeve in the air and there appeared a palace made of red bricks and green tiles in front of them. In the palace there were many buildings and pavilions connected by dozens of meters of corridors. The celestial beings were amazed and voiced their admiration. Then Yu’e Celestial Being spread her left sleeve into the sky and said, “Please”. Suddenly more than thousand kinds of grass, plants and trees such as the bamboo, pear trees, willows, pine trees, berry trees and red wood grow beside the pavilions and buildings and on the wild fields in the palace. The trees and plants swing in the breeze and give out fragrance. The fruit hangs on the trees. The celestial beings cheered again for the wonder. Then a skinny celestial being with only 1 eye on the forehead said, “Sister Yu’e, what do you plan to place in the open space?” Yu’e giggled and gave a wave into the air with her two hands. There appeared a pond in the space. In the middle of the pond there was an artificial hill with water rushing out of the top. The fragrant lotus, swimming swans and mandarin ducks, the jumping gold fish and frogs made scene attractive. Another round of cheers came. Then a bare-foot Buddha with big belly and mouth said loudly, “Sister Yu’e, your spells are excellent. But would you like to serve us something to eat because we have travelled far to your Island.” When saying this, he touched his big
belly protruding out of his clothes. The other celestial beings also agreed with him and looked at Yu’e Celestial Being.

Yu’e gave another smile and jumped on the cloud 10 meters above the ground. She extended her right hand with 5 fingers stretched and pointed to the peach tree beside her. The peaches in the tree were all absorbed into her hands. She closed her hands, threw out the peaches suddenly and said, “Please have a look.” The peaches rolled into the crowd and grew larger, turning the delicate and old-fashioned square table and back rest chairs. The celestial beings took their seats happily. Then Yu’e said loudly, “Attention, please”. She blew a mouth of celestial mist covering a pear tree. Moments later, the mist disappeared and the pears began to drop onto the ground, turning into the pretty fairies in colorful silk cloth. Holding fruit plates with strange fruit in their hands, the fairies came to the tables and settled the fruit plates, saying to the celestial beings gently, “Please”. Then they turned and stood behind the celestial beings. Before the celestial beings ate the fruit, Yu’e said loudly for another time, “Please look.” She bowed to the pond and clapped her hands. The frogs in the ponds jumped out and turned into the handsome young men in black holding the long-mouth kettle made of the glazed pagoda and amber luminous cups. These young men walked to the tables and poured the wine in the kettle into the luminous cups. The wine shines in the cups with fragrance. The celestial beings admired, “This is the most fragrant wine I have ever smelled”, “Excellent”, or “My heart is drunk”. Yu’e, holding one cup in her hand, said, “It is my great honor to have your presence on my Island. The wine is specially prepared for my distinguished guests. Cheers.”

The celestial beings were about to drink when they saw the spiritual light ripples in the cup. At the bottom of the cups something special appeared. Some cups had the swimming gold fish. Some had the little dragon flying. Some had small tortoise moving. Some had sea horse running. Some had starless fish moving. Some had pearl shining. Almost all the sea fish and animals could be seen in the cups. The celestial beings understood that these are the miraculous drug given by Yu’e. The celestial beings laugh or said thanks to Yu’e. They raised their cups and drank the wine. The waiters filled their cups again and the celestial beings drank for another round of cheers. When they were enjoying themselves, a celestial being said loudly, “Yu’e, we know your spells have almost reached the peak. But can you show something more to us?” The celestial beings followed the voice and saw 8 elderly celestial beings sitting under the grape trees. One of them was a kindly-looking and bald-headed one with long white hair and dragon-head stick. He waved hands to the celestial beings. He was the highly respected Empty Buddha from the Infinitude Island in the Elysium World. Out of respect, the celestial beings put down their cups and became quiet. A kid celestial
being asked the Eagle-nose Celestial Being beside him, “You don’t know him because you have just come from the Ten Thousand-year World after self-refinery. He is most of the most competent celestial beings in the Celestial Islands Continent. His has multiple and wonderful spells. In his eyes, the spells of Yu’e are just the games of the kids. Keep quiet and let’s see.” Yu’e Celestial Being, with her hands together, bowed to the Empty Celestial Being and said, “Master Empty, hope you can enjoy my trivial spells”. She then shouted to the pond, “Kids, it’s time for you to give the dance”. Suddenly, the ducks in the pond jumped to the air and became musicians. Some played pipa, some played flute, some played bamboo flute, some played violin some played drum and some played hammer. At the same time, the swans in the pond also flew to the cloud and turned into the pretty fairies. In a short moment, the fascinating music began to echo in the air. The fairies began to dance and show their youthful energy and sexy posture. The celestial beings laughed happily. The performance lasted for about 1 hour. Then the fairies and players went back to the pond in the form of swans and ducks.

When the celestial beings had enjoyed themselves, they stood up. An elderly lady celestial being, with purple hair on the head, gave a Zen posture (with her palms together) and said to Yu’e, “Yu’e Sister, thank you for your hospitality. I want to go back home now because I have to handle some business on my Island.” The other celestial beings also said, “We will have to leave now, thank you for much”, “Next time I will host you on my Sufficient Treasures Island. See you” or “See you next time”. Then they all rode on their animal vehicles and flew in the sky. Celestial Being Yu’e bade farewell respectfully with her hands joined, looking up in the sky and said, “Thank you for your presence on the Snow Peak Island.” When all the celestial beings were not seen in the sky, she waved her right hands and left hands, gave a Zen posture with her palms staying together and gave out a mouthful of white mist. Suddenly all the buildings, pavilions, trees, flowers, grass, mandarin ducks and ducks all disappeared. The land returned to the wilderness. She was then transformed into a golden ray, which merged in the snow peak immediately.

**Three Worlds Two-way Continent**

The Three World Two-way Continent is a mysterious one. From the perspective of the material world, it cannot be found at all in the Universe. The Continent is just like a miniature of the Earth Universe. That is to say, the Earth Universe is the multiplied version of the Three Worlds Two-way Continent. However, it is not the plain multiplication because the God of the Heaven World going to the continents for inspection, the Buddha or God from the celestial world going to the Mortal World for survey or another cycle of life,
or the people of the Mortal World heading towards the celestial world due to their successful self-refinery, have to pass the Three Worlds Two-way Continent.

Only after entering the Space Tunnel can we see the outline of the Three Worlds Two-way Continent. But it doesn’t mean that each person, Buddha or God who has entered the Space Tunnel can see its overall outline. In most of the cases, they just pass by the Continent. For example, the people of the Mortal World who have had the perfect human nature enter the Space Tunnel after their death. At the end of the Space Tunnel, they will see a Colorful Life Bridge, the passage to the Three Worlds Two-way Continent. After they pass the Colorful Life Bridge, the “administration” of the Continent will, in accordance with their spiritual nature, send them to the Thousand Year World just like sending a fax. The people cannot stay in the Three Worlds Two-way Continent. If the Heaven World decides to send a celestial being to the Mortal World to accomplish a mission, they will first summon him or her to the Three Worlds Two-way Continent before “faxing” the celestial being to the Mortal World.

The Three Worlds Two-way Continent is like this in my eyes. After passing the Colorful Life Bridge, we can see a rainbow heaven gate. Looking into the gate, there seems to be a colorful tunnel. After walking into the gate, we can find there are 36 doors along the tunnel standing opposite to each other. At the end of the tunnel is a brilliant radiance.

Looking into the first door, I saw the burning fires with the extreme heat. Many people were in the fires crying and moaning, suffering from the scorched skin and flesh, which was really brutal. The angel said to me, “This is the Inflaming Layer. They are suffering because it’s their retribution. All people who had been killing or torturing others have to endure the sufferings here.”

Seeing into the second door, I found the ice blocks and cold winds inside. Many people were frozen in the ice layers, unable to move or cry. The chilly cold air penetrated their skins and bones, causing severe pain in the body. The angel told me timely, “This is the Frozen Layer. One good turn deserves another. They had done many bad things in the Mortal World and they deserve it. You don’t have to show mercy to them.”

I looked into the 3rd door and was frightened. It was really a horrible world. I saw a man trying all the means to hide himself when numerous monsters, devils, goblins and ghosts were chasing him. He rushed to a tree and stood
against it, trying to hide himself from them. Unexpectedly, the tree stretched out its hairy, bloody and thin hands in front of his eyes, then towards his neck. He ran away scared and came to a rock, standing against it. Suddenly he felt someone scratching his back. He looked back and cried, “Oh, my God”. A bloody head was on his shoulder with the green eyes looking straight at him. He was so scared that he rushed forward. Nevertheless, the ground where his feet stood cracked and sunk him. He looked down and saw thousands of poisonous snakes and centipedes were gazing him at about a dozen of meters below him. Many snakes began to climb towards him.

I got sweated and dared not to see any more. The angel said, “This is the Hell World. Those who had domineered and forced people out of their living have to endure the sufferings here after their death. Otherwise the spirits of the people prosecuted by them would cry in front of the Heaven World gate, making a lot of noise and chaos.”

In the 4th door, I saw many scenes. In one scene there was thunder, lightning and strong wind. The grass and flowers trembled in the wind and the trees swung trying to keep its branches unbroken. In one scene there was scorching sunshine that made the land crack. The trees, grass and flowers curled in the heat trying to keep alive. In one scene there was comfortable sunshine and breeze. All things were flourishing. But when I looked carefully, I found the grass, flowers and trees were suffering human chopping, house treading, sheep and insect biting. In the last scene there was heavy snow and the grass and trees were withering. The angel explained, “This is the Plant World. The trees, grass and flowers in the World are transformed from the life in the Inflaming Layer, Frozen Layer and the Hell World. In the Plant World, they will have leaves, blossom, have fruit, reproduce and serve the insects, animals and humans. In their past cycles of life, they had consumed too many natural resources and had done nothing good for the insect world, the animal world and the human society. So they have to compensate for what they have done in the past in the Plant World.”

In the 5th door, I saw the brutal scene where the law of the jungle was working. Everyday all the animals were afraid of being eaten by other animals. Even those on top of the chain had to be cautious of being attacked by the humans or eaten by the same kind of animals. Meanwhile, they had to suffer from the old age and the enduring death from hunger. The angel said, “The people in the Mortal World who had been domineering, bullying others, showing no sympathy or mercy, love to fight or rob, and don’t sustain their parents would have to enter the Animal World after their death and receive the punishment.”
I walked into the 6th door and saw people riding on the horse, the cows plowing or milking, the donkeys carrying goods, the dogs guarding the house, the cats hunting rats, the hens, ducks and geese laying eggs, the sheep providing wool, and the pigs supplying meat. The angel explained, “All the livestock are providing the most service as they can with the lowest demand. They do so because they had owed others when they were the humans. They had occupied others property or land, received bribery, cheated others of their wealth with lies or fake goods, or failed to repay the debt. After they died, they would change into the animal husbandry and make compensations in the debtor’s homes.”

I entered the 7th door and saw the scene in the Mortal World. The people were noisy on the streets, some were crying and some were laughing. They were restless with nothing in their minds. The angel explained, “The Mortal World is a transit station between the Heaven and the Hell. The wise people would engage in self-refinements and self-improvement. After they die, they would enter the Heaven World. The unwise people lived with their mind blocked. They just followed the trend and kept breathing. In the next cycle of life, they would become human beings, too. The foolish people spent their days blindly busy, trying to gains things at all costs. But they don’t know the loss is gain and the gain is loss. The consequence is that they have overused their fortune and would be downgraded into the lower world.”

I asked the angel, “What behavior makes the best life?”

The angel answered, “The wise life with the behavior of the spiritual nature makes the best.”

I asked again, “What is the wise life the behavior of the spiritual nature?”

The angel explained to me, “The Jehovah's Witnesses live ordinary family life without lust. They don't engage too much in the worldly grudges and concentrate on the pursuit of the future grace. This is the wise life with the behavior of the spiritual nature. The Buddhist and Taoists refining themselves in the temples also purse the highest spiritual nature at the lowest demand. They have seen through the vanity of the world and desire the Buddha state. This is also the wise life with the behavior of the spiritual nature. And the Muslims and Christians tolerate the dissidents and behave modestly. This is also the wise life with the behavior of the spiritual nature.”
“Then what about the other people? Does it mean only those who believe the religions can live the wise life with behaviors of spiritual nature?” I continued to ask.

The angel answered, “To live the wise life with behaviors with spiritual nature, the people don’t have to believe or join a religion. Those who become religion believers want to listen to the teachings, get into a proper environment, and strengthen belief through some rituals. If they have strong beliefs, they don’t have to be confined by the rituals. Indeed, those who will become celestial beings might not think so in their mind and those with the highest wisdom are often not the religion believers.”

“Do the kings, emperors, ministers, heroes, great people, the rich, the dignitaries, the specialists and scholars in the Mortal World live the wise life with the behaviors of spiritual nature?”

“It depends on their heart and behaviors. In general, those who purse the worldly fame, wealth, position and welfare are not living the wise life with behavior of spiritual nature. The more they have gained in the Mortal World, the less they will reserve in the celestial world and less probable they will enter the celestial world.”

“What about the common people?”

Most common people have no time to consider the deep life meaning because they are busy making a living. So their time is engaged in handing the daily affairs. Strictly speaking, their life is no difference from that of the busy worms. Due to the shallow perception, it is difficult for them to establish the firm belief. Only a few common people know how to follow their nature, lead a natural life, and keep their mind at peace. If they can be educated properly, they can also live wise life with behavior of spiritual nature.”

Before I continued my question, the angel said, “You have stayed here too long. I can’t explain too much otherwise I will violate the Heaven laws.”

“Please, this is my last question. Can we see the Celestial World from the Mortal World?”
The angel answered, “In general, you can’t see the Celestial World from the Mortal World. Only a few designated people can see it. That’s the mirage seen by the people in the Mortal World.”

After that I made a rush visit to the Thousand Year World, Ten Thousand-year World and the Elysium World. In the Elysium World, I visited the Cathode Black Hole Body, the Heaven World, the Zero World and Holographic Order World. Upon arriving at the 7th door, the angel pushed me into the door before I knew it. I felt faint and dropped into a black hole with my head down. Gradually I lost my perception and memory.

**Moon Temple Continent**

This is where the celestial beings listen to the teachings by the Allah, ancestor of the Buddha and Yahweh.

**Gods Continent**

This is where the God of the Celestial World arranges the events for the celestial beings (Buddha).

**Supreme Authentic Wisdom Continent**

This is where the apprentices of the Ancestor of Buddha with the highest Buddha nature live.

Apart from the above-mentioned Thousand Year World, Ten Thousand-year World, the Elysium World, Inflaming Layer, Frozen Layer, Hell World, Plant World, Animal World, and Livestock World, the other worlds include:

**Holographic Order World:** It refers to the protective outer layer of the Earth Universe (just like the eggshell). It seems that it is composed of the high-energy cloud cluster. In the Chaos World, once you have understood it, the thinking can enter the state of chaotic thinking. And you can have full perception of complete freedom and the God. At that time, everything you do is right, even if you kill hundreds of people because you have been integrated with Tao.
The Zero World: It is where the Allah, Ancestor of the Buddha and Yahweh stays.

The Heaven World: It is the core of the Earth Universe and where the God moves about administering the Universe.

The Cathode Black Hole Body: It is the planet with the highest energy in the Universe and where the Gods violating the heaven laws are imprisoned.

The Anode Black Hole Body: It is the womb of the females or women.

The Dream World: It is the negative space entered by the spiritual nature of the life in the sub-consciousness. It is the vast space without the existence of time-space. The space reflects the history and current situation of the dreamers. In fact, it mainly reflects the future of the dreamer in metaphors instead of directly. Sometimes the reflection is reverse. All life will have dreams, not only the humans, but also the animals, plants and celestial beings.

The Insect World: The world of the insects.

The Bacteria World: The world of bacteria.

The Landscape and Climate World: The space where the mountains, stones, rivers and weathers operate.

The Zero World, Heaven World, Elysium World, Cathode Black Hole Body, Thousand Year World and Ten Thousand-year are the senior spaces of life.

The Livestock World, Animal World, Plant World, Hell World, Inflamed Layer and Frozen Layer are the junior spaces of life.

The Holographic Order World, Anode Black Hole Body, Dream World, Insect World, Bacteria World and the Landscape and Climate World are the intermediate world.
4. The Use of Space

The living space is vital for the humans. Different spaces have different life meanings. The ultimate goal of human life should be the senior space life, instead of the junior space life.

The space can change the objects' form and their movement laws. The space change can trigger the changes in the physical function, thinking modes and activities. The space can be expanded, compressed or twisted. So we have to make full use of the space.

(1) Surmounting the Space

What we see in our eyes is where we are going. The space that our consciousness (the spiritual perception) can perceive is the space where our spiritual entity will be after the death of the flesh body. So we have to surmount the existence space where we are now, extending our thought to the senior space with our thinking, imagining and knowing the situation in the Thousand Year World, Ten Thousand-year World and the Elysium World, reinforcing our belief so that our psychology and mentality can move towards the senior space. If we can persist in doing so, the space in our imagination will move towards us. We will realize our dream and lay the foundation for the spiritual body of life to enter the senior space after the death of the flesh body.

(2) Compress and Expand the Space

Can the space be compressed? The answer is yes.

“Bosom friends within the four seas are close neighbours though separated by great distance.” After the Internet came into being, the remote distance is right in front of our eyes. The space changes as the size and location of the materials and the life consciousness change. If the matters do not exist, there will no consciousness or space.

One way to compress the space is to strengthen the space. As our perception of a certain space deepens, the distance between the space and us will narrow. When our consciousness is integrated into the space, the spiritual body of life will reach the space. Then we can leave the Mortal World and enter the charming senior space in our consciousness.
The way to expand the space is to gradually get out of the space in our consciousness we don’t like, keep the space we don’t like away from our consciousness, expand it till it disappears. Thus we can get out of and surmount the space we don’t like and develop into the senior space of life.

The way we get out of the worldly life is to expand our space. The way to enter the Celestial World is to compress the space between us and the Celestial Space. If we can freely expand and compress spaces, we can surmount the space and free ourselves from the constraint by the space.

(3) Change the Space

If the space where we live has constrained us from employing our freedom and competency, or has put us at risk, we must find some way to change the space and instead of waiting for the space to change by itself. If we don’t change the space, the space will change us.

Only by setting our direction and target, can we realize our ideals gradually. To make use of the space in the most effective way, we must first understand the origin, function and meaning of life. The following two chapters “Humans” and “Life” will discuss the target. Please see the Chapter of Humans.
